MEDICAL FOOD BREAKTHROUGH

For the Treatment of Chronic Liver Disease in the Form of Hepatitis C

HepTech

HeptoBoost I

Intracellular antioxidant replenishment

- Comprehensive linked-chain antioxidant replenishment system
- Essential co-factors of several metabolic reactions
- R-Lipoic Acid - a critical antioxidant
- Benfothiamine stimulates NADPH production for glutathione regeneration
- Enhanced endogenous glutathione production

HeptoBoost II

Intracellular glutathione production

- Optimal doses of nutritional building blocks for glutathione production
- Fully formed glutathione for spaces and gastrointestinal health
- Added Bio-Curcumin, Milk Thistle extract, R-Lipoic Acid and Selenium
- Glutamine for gastrointestinal health

FibroGuard

GRAS botanical anti-inflammatories

- Isolated botanical polyphenols from spices, berries and plants
- Modulates NFkappaB activation, stellate cell activation, and myofibroblastformation
- Provides specific antioxidant protection
- Broadly suppresses hepatic inflammation

HeptoShield

Pharmaceutical-grade 99% pure polyenylphosphatidylcholine

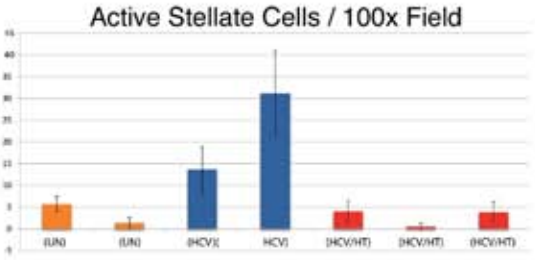
- Extremely bioavailable form of cell membrane phospholipids
- Also supports internal cell membranes, such as ER, golgi system, etc
- Enhances membrane fluidity, membrane signaling and intramembranal biochemical reactions
- Only pharmaceutical-grade, ethanol and glycol-free PPC available in North-America
- Advanced preservation process greatly reduces lipid peroxidation in product

Comprehensive Medical Food Protocol

View the full HepTech Anti-fibrotic Study from the University of Alberta
www.heptech.com/hcv-research.php

The HepTech anti-fibrotic protocol reduces SMA positive (activated stellate) cells.

HepTech is a comprehensive four-product liver health support system that combines all currently known concepts of liver protection. This management system is designed to increase intracellular glutathione production, replenish the intracellular linked-chain antioxidant system, support intracellular metabolic processes, provide GRAS botanical anti-inflammatory to suppress the conversion of liver stellate cells to fibrosis forming myofibroblasts, and to supply 99% pure pharmaceuti-cal-grade polyenylphosphatidylcholine for cell membrane integrity, fluidity and signaling.



Ameliorate the clinical manifestation of Hepatitis C with HepTech's Medical food protocol.

Based on the latest science in liver health and Hepatitis. This study was conducted with chimeric mice, transplanted with human liver cells.
