gemicitabine followed by 20 mg Ukrain per week. Survival rates after six months were 26% in group A, 65% in group B and 74% in group C. The result showed that in inoperable advanced pancreatic cancer, survival rates were doubled using Ukrain in combination with gemicitabine.[9] We have also obtained similar results and continue to obtain excellent results using Ukrain in combination with chemotherapy to treat pancreatic cancer. This correlates with the study of Berger et al. with patients still alive after 28 months (19 months only with chemotherapy), but we have cases with survival up to 4 to 5 years, which is excellent, truly demonstrating the efficacy of Ukrain in treating pancreatic cancer.[10]

Other cancers that responded positively to Ukrain include breast, colon, and uterine. A case that I presented of advanced uterine cancer with metastasis in the *Townsend Letter* showed a total elimination of a 6 cm wide tumor and many secondary lesions of 2 cm in 3 months time, to the surprise of the doctors at the Portuguese Oncological Institute.[11] Many similar cases are available at www.sergejurasunas.com, and for even more, just type "Serge Jurasunas and cancer."

No matter how many thousands of cases were treated with success over the past decades in private practice, clinics, integrative oncology hospitals – with Ukrain being cut off, we are at a standstill. Several of these clinics and hospitals utilized Ukrain as the main treatment, such as the clinic of Aschloff that I mentioned earlier in the article. This is a 50-bed clinic specializing in treating most types of cancer, or at the hospital of integrative oncology of Dr. Douwes, president of the German Society of Oncology.

Other countries that use Ukrain include Austria, Holland, Spain, England, and even Israel, where my colleague and friend Dr. Joseph Brenner, chief oncologist at the Oncology Center of the Wolfson Hospital (Holon, Israel) and director of the New Hope Clinic of Integrative Medicine, related to me that he has used Ukrain with pancreatic cancer and has obtained excellent results. How can the Austrian authorities believe that an oncologist such as Brenner doesn't know what he is doing and is misleading his cancer patients?

Here we are talking about not just a few cases, but about highly trained medical doctors and prominent oncologists with vast experience treating cancer, achieving much better results in every way with Ukrain than by conventional treatment alone. This is totally insane on the part of the Austrian authorities, who probably were given a twisted version of the real therapeutic value of Ukrain.

We don't pretend that Ukrain is a panacea or claim that it may be totally substituted for chemotherapy, although in particular cases I have witnessed the efficacy of Ukrain without chemotherapy. Ukrain, however, is a strong support by itself to chemotherapy, with few or no toxic side effects and greatly contributes to increasing the efficiency of chemotherapy and increased lifespan.

Therapeutic Effects of Ukrain

- increased survival rates
- decreased tumor size
- decreased tumor markers
- increased remission rate
- may be substituted for chemotherapy in cases of severe allergy or tumor drug resistance

I have not been in direct contact with Nowicky, only his son. He explained that his father was not allowed to speak to me or, I presume, other doctors such as Aschloff in Germany. To secure his release he was obliged to sign a statement that guaranteed that he would not contact any doctor or person using Ukrain, essentially a gag order. In no uncertain terms, this was the tactic of a dictatorship.

I decided to do something about it by first contacting the listed doctors using Ukrain to see if a protest could be sent to the Austrian authorities, where we would begin by conducting a mutual protest with a petition signed by the majority of these doctors.

Medicopolitical Plot

I was contacted by Dr. Kroiss, of the Kroiss Cancer Center for Alternative Cancer therapy, who previously had been in trouble with the Austrian Medical Association, which pressured him to abandon alternative cancer treatments. Kroiss suggested that we form an organization of European doctors (as well as from other countries) and asked if I would be in position to do something about this travesty.

I believe that founding such an organization would be the first step toward strengthening and defending our vision of how cancer should be treated and to take action in the defense of Nowicky. One of my projects will be to set up a European Coalition for the Freedom of Choice in Cancer, which may need more time to organize but may be necessary against further repression against individual doctors who are unjustly intimidated ➤
