Nourish Your Genetic Potential with UBQH™

– the active form of CoQ10

The true potential of CoQ10 lies not within its bioavailability, but rather, its bioactivity.

For many patients, supplementation with CoQ10 is not enough. Genetic predisposition and aging can limit the body's ability to convert ubiquinone (CoQ10) to its active form, ubiquinol (QH).

UBQH supplementation results in a greater sustained plasma level of total CoQ10 than traditional CoQ10 supplementation–delivered to your patients in an exclusive, clinically studied delivery system.*

With UBQH, the potential is limitless.
