

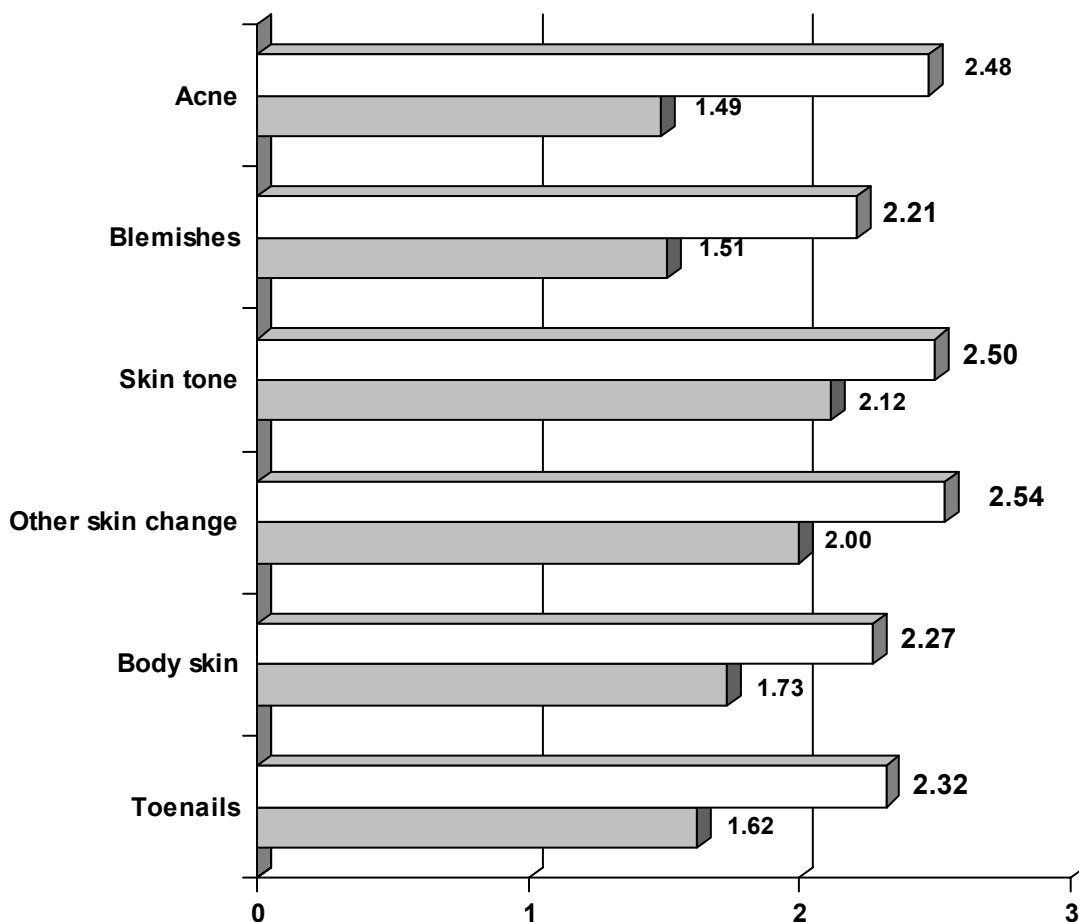

**Figure 8. Differences in Assessment of Results
by Age Group — Hair and Skin**

The mean ratings of younger participants were significantly better (p value of .05 or less) in six hair and skin measures.

The rating scale used was: 0 = worse; 1 = no change;
2 = slightly improved; 3 = improved; 4 = much improved.

■ Mean score for 55 years and older □ Mean score for under 55 years of age
